

New Ideas, Solutions, Free Groups & Rare Info

► Separate free papers to help people

► A group to search for extraordinary people, ideas, products & inventions

The aim is to find what is significantly better than those widely known or available. Many superior inventions and discoveries have been suppressed.

► Inventor's Society

We need to find or form a data base of honest manufacturers, investors and distributors that could help inventors.

► Weather Organisation

The aim is to record and share data, improve forecasting and to provide people with weather instruments so that recording is done in more areas. The website automatically uploads local data and has links to many sites. Past records are wanted especially of extreme weather.

► Memory test. What will improve your memory?

The aim is to find what can noticeably improve our memory.

► New ideas to restore democracy & prosperity

Innovative win-win ideas and policies not often thought of, that can solve our problems. Solutions to help the economy, environment, poverty and much more. An alliance of quality independent candidates that agree on good core issues could be formed where the candidates could still have their own policies to serve their electorate.

► True conspiracies & solutions on how to avoid them

A plan for a better system that is more efficient & enjoyable.

► Does prayer work?

A group to search for people who can produce the evidence that they are supernaturally led by God in practical ways, and that their prayers make a noticeable difference. If we could find them, they could help us, pray for us and lead us to the truth. Then we could more affectively serve God and assist people.

Also information on: True Christianity; Suppressed truths which are vital to know and are not taught in churches; Ways to bring revival; Prophecy; Widespread deceptions.

► Inventions with huge advantages

* Super light tents with a unique heat retaining option.

* Backpack and seat frames that cool ones back.

* Weather instruments.

* Rapid tab index systems that attach to existing books.

* Water saving irrigation sensors.

► Much more.

For more information on what is described in this paper please see truesolutions.info or contact Richard Hole, 9 Leonard St, Tolga 4882, Australia. Ph. 07 4095 5447 in Australia or +617 4095 5447 internationally. I prefer you email. rh@truesolutions.info Please distribute and sponsor this free information.

Free papers about specific topics are available. Emails about these subjects are also available in a format so they can be shared.

Workers Needed for Projects to Benefit Many People

Do you know of anyone who could help me with some innovative projects that should benefit many people? People would not have to spend much time if they are not able to because different people could work on different projects. For example: doing experiments, making inventions and sharing information to inform people about these projects. I am willing to pay people for their help. I have a number of ideas and community projects below. It does not matter where those who assist live as I have even had people overseas providing help in the past. Some of the products listed below may also be available somewhere. Please let me know if you find any at an affordable price.

Some of the projects are:

- ▶ To search for and make suppressed inventions that are more cost-effective or superior than those that are widely available. An aim is to research and list genuine inventions that are proven to work and expose fraudulent claims.
- ▶ To search for and make free or more cost effective generators. Reputable people claim and give examples of many systems that are much more cost effective than widely known systems, yet they were suppressed by those with vested interests in current technology. I have plans from a researcher that has exposed false claims but listed ones that reputable people say work.
- ▶ To set up weather stations to enable more weather data to be collected which should give a better picture of the climate and extreme conditions in an area. This will also help with forecasting.
- ▶ To set up weather cameras that could automatically rotate 360 degrees and upload high quality digital still images to a website.
- ▶ To find people interested in astronomy. An aim is to have viewing nights and teach people about the important aspects. I can point out many celestial objects with my laser. I plan to form a local group and work with other groups that are interested in viewing and learning about it. Please see more information at <http://tolga.info/astronomy>.
- ▶ To develop or find a dust sensor alarm to alert people when there is dust or smoke in the air outside so that they can shut windows, remove washing from the clothes line or take other precautions. This would enable people to shut the windows before the pollution gets inside their house.
- ▶ To develop or find an affordable but accurate oxygen or carbon dioxide sensor to determine the level in the house to enable us to know if there is enough fresh air inside.
- ▶ To develop or find an affordable wireless transmitter switching system capable of transmitting to switch a device hundreds of meters away. One use would be for a water saving irrigation sensor out in the field to transmit back to a solenoid or pump to start irrigation. Another one of many possible uses would be for the transmitter to be connected to a rain sensor circuit that could be positioned in the direction where most precipitation comes from. This would alert people when it is about to rain or drizzle. Interested people could have a receiver that buzzed when the sensor became wet due to rain or drizzle. A different sounding buzz could sound when the rain stopped.

Products with Huge Advantages

I am developing or reselling the below products. I plan to put any profits back into projects to help many communities.

Sellers are needed to sell these. I could pay commission to save you having to buy them. You could sell them from your home or shop or at the markets or online.

- ▶ Rain or drizzle sensor circuit which sounds a buzzer when the rain or drizzle begins and sounds another buzzer when precipitation stops. It would be useful to alert people when to shut windows, take washing off the clothes line, shelter rain sensitive equipment or begin a job where you need to wait until the rain or drizzle stops.
- ▶ Frost or fridge alarm
- ▶ Weather instruments
- ▶ Alkaliser and Ioniser treatment systems. Alkaline Ionised water is a healthy alternative to ordinary purified water. Water from the Ioniser is also purified to 0.1 micron, which is ten times above the industry standard.
- ▶ Affordable magnetized water system that can ionize all the water on your block of land. Studies have shown that it increases the growth rate of plants and results in increased yields. The water is better for your health than ordinary water and it reduces scale build up. It degasses the toxic chlorine in water.
- ▶ More cost effective energy generators that not many people know about.
- ▶ Carnivorous plants with a self watering wick system for easy care. The plants have beautiful leaves and flowers. They make ideal gifts and eat pests. See <http://www.advantagein.com/cp/>
- ▶ Bird scares.
- ▶ Other inventions and products with advantages over well known systems. They include the ones listed over leaf.

Please see more information at advantagein.com/community.htm and contact Richard Hole on (07) 4095 5447 or (07) 4095 4354. Email: ovl@truesolutions.info 9 Leonard St, Tolga 4882.

Your help would be appreciated.

Regards Richard.
